

2008 Competition Database Report

2010

The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

Accounting & Reporting

Accountants, members of the insurance industry and educators will find relevant information about statutory accounting practices and procedures.

Consumer Information

Consumers, educators and members of the insurance industry will find important answers to common questions in guides about auto, home, health and life insurance.

Financial Regulation

Accountants, financial analysts and lawyers will find handbooks, compliance guides and reports on financial analysis, state audit requirements and receiverships.

Legal

State laws, regulations and guidelines apply to members of the legal and insurance industries.

NAIC Activities

Insurance industry members will find directories, newsletters and reports affecting NAIC members.

Special Studies

Accountants, educators, financial analysts, members of the insurance industry, lawyers and statisticians will find relevant products on a variety of special topics.

Statistical Reports

Insurance industry data directed at regulators, educators, financial analysts, insurance industry members, lawyers and statisticians.

Supplementary Products

Accountants, educators, financial analysts, insurers, lawyers and statisticians will find guidelines, handbooks, surveys and NAIC positions on a wide variety of issues.

Securities Valuation Office

Provides insurers with portfolio values and procedures for complying with NAIC reporting requirements.

White Papers

Accountants, members of the insurance industry and educators will find relevant information on a variety of insurance topics.

For more information about NAIC publications, view our online catalog at:

Companion Products

The following companion product provides additional information on the same or similar subject matter. Many customers who purchase the **Competition Database Report** also purchase the following product:

Profitability by Line by State Report

Statistics derived from state page data in the annual statement and the Insurance Expense Exhibit can be used to compare profitability among different states and property/casualty lines. For each line and each state, this publication presents aggregate statistics on premiums, losses, expenses, investment income and estimated profits for the preceding calendar year. Also shows estimated underwriting profits and operating profits, as well as estimated federal taxes. Updated annually.

How to Order

2008 Competition Database Report

Introduction

The *Competition Database Report (Competition Report)* was created to provide a single source of reference measures that serve as a starting point for examining the competitiveness of state insurance markets. This report previously contained data only on commercial lines, but beginning with 2008 data, it will also include data on personal lines.

Some lines of insurance may contain both commercial and personal data depending on the state. An assessment was made to place each line under the category where it best fit, even if it may include some data from the other category. For example, farmowners may include some commercial exposure, but for this report, the decision was made to place the line under the personal lines heading.

Analysts look to several factors to determine the competitiveness of a market, including market concentration, market entries and exits, market growth, availability, and profitability. The data used to calculate the measures in this report are found in property and casualty insurer annual statement filings received by the NAIC and, in all cases, are shown on the basis of insurer groups rather than individual insurers.

In reviewing these measures and making interstate comparisons, the reader is encouraged to keep in mind that measures of competition ultimately reflect a very complex set of factors, and that the information in this report functions as a starting point for measuring levels of competition. The Property and Casualty Rate and Policy Form Model Law lists a set of economic tests to be used in determining whether a competitive market exists. These are “relevant tests of workable competition pertaining to market structure, market performance and market conduct....The determination of competition involves the interaction of the various tests and the weight given to specific tests depends upon the particular situation and pattern of test results.” The measures in this report are consistent with, but not an exhaustive list of, those described in the model law.

In this report, the reader will find various structural and performance measures that are readily determinable or available from NAIC databases or other sources. While these measures are presented on a by-line, by-state basis, insurance markets are not usually defined in such a straightforward manner. This report is meant to be a starting point for studies of competition and can provide insight when it is used to make multi-state and multi-year comparisons.

This report was prepared by the NAIC Actuarial & Statistical Department staff under the direction of the Casualty Actuarial and Statistical (C) Task Force. If you have any questions regarding this report, please contact Aaron Brandenburg (abranden@naic.org) at the NAIC at (816) 783-8271. Additional copies can be obtained from an NAIC representative at:

Disclaimer: The Competition Database Report provides reference measures that serve as a starting point for examining the competitiveness of state insurance markets. The NAIC does not consider the information contained in this report to be the only information that should be used to determine whether competition exists in a particular state or line of business.

Insurance Markets

To define a market, one must examine the product and the sellers and buyers of the product. Markets for commercial and personal property and casualty insurance products may not match the by-line, by-state format found in statutory annual statements. For example, doctors, hospitals, nursing homes and other types of medical providers are the buyers in the medical malpractice insurance markets. However, each of these types of buyers, and the insurers that sell them coverage, represent different markets that are all reported together in the annual statement line of business called “Medical Malpractice.” To a large extent, these medical malpractice markets differ from one state to the next, resulting in hundreds of them across the country. As another example, a single state may contain what could be considered several homeowners markets due to the diverse risks contained within the state.

Thus, while some of the line-of-business/state combinations in this report represent the aggregation of several smaller markets in a state, and other combinations represent parts of multi-state markets, the measures presented can be used as a basic starting point for exploring competitiveness. In order to explore competition in an insurance market, the link between the data and the market in question should be refined.

More information concerning the homeowners and personal automobile insurance lines can be found in the Auto Insurance Database Report and the Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report published by the NAIC. These reports include additional data concerning average premiums and expenditures and may be useful in studying the competitiveness of those markets.

Concentration Measures

Concentration is an important aspect of market structure. A particular state may have hundreds of companies selling insurance, but if a handful of companies write a majority of the premiums, they may be able to control the market, and its competitiveness is subject to question. Several methods exist to measure market concentration in a meaningful way. This database includes two such measurements.

Market Shares:

The market shares of the four largest groups (Column 2), denoted as a percentage, is calculated by dividing the sum of direct premium written by the four largest insurance groups in the market by the sum of direct premium written by all groups. This traditional measure of market concentration is often used as a rough indicator of market competition. While there is no formal way to determine market competitiveness based on this calculation, values above 50 percent suggest that concentration at least be given a closer look in judging the overall competitiveness of a market.

Herfindahl-Hirschman Index (HHI):

The HHI (Column 3) is calculated by summing the squares of the market shares (as a percent) of all groups in the market. For example, if a market had only one seller, its market share would be 100 percent and the HHI would be 10,000. If a market had 10 sellers, each with an equal 10 percent of the market, the HHI would be 1,000. Although there is no precise point at which the HHI indicates that a market or industry is concentrated highly enough to restrict competition, the Department of Justice has developed guidelines with regard to corporate mergers. Under these guidelines, if a merger of companies in a given market causes the HHI to rise above 1,800, the market is considered highly concentrated. If, after the merger, the HHI is between 1,000 and 1,800, the market is considered moderately concentrated, and an HHI less than 1,000 is considered not concentrated. Since these numbers are guidelines, judgment must be used to interpret what information the HHIs provide for a particular market.

A critical issue in interpreting the HHI is the definition of the market being measured. The issues mentioned under Insurance Markets on page 3 apply to the use and interpretation of the HHI.

Market Participation/Entries and Exits

Analysts of competition are usually interested in how many insurance groups are participating in a market, as well as how many insurance groups are deciding to enter or leave a market. A market demonstrating a steady increase in the number of groups providing insurance (more groups enter the market than exit) can be considered a strong market where insurers see an opportunity to make a profit. Conversely, markets where more groups are exiting the market than entering may indicate that insurers are unable to earn a profit sufficient to justify a continued presence.

Since there are a number of insurance groups that, for various reasons, have a very small amount of direct written premium in a given market, a threshold was used to identify true market participants. While a number of different thresholds could be used, in this report the threshold is 0.1 percent of a market's total direct written premium.

Number of Sellers (Insurance Groups):

The number of sellers (Column 4) is the number of insurance groups that have affiliate insurers writing premium in the market above the threshold. The number of sellers in a market can, along with other factors, indicate the overall competitiveness of a market. The information available to the NAIC does not distinguish between sellers that are open to both new and renewal business and sellers that write renewal business only. (This data limitation also affects the interpretation of the concentration measures found in this database.)

Number of Entries and Exits:

The number of entries and exits is the number of insurance groups that have affiliate insurers writing premium in the market that have either entered (Column 5a) or exited (Column 5b) the market at any time over the past five years. Entries and exits provide information about the quality of the market, in that more entries than exits may indicate a healthy market, and more exits than entries may indicate an unhealthy market. In this report, an insurer enters a line of business when its direct written premium rises above the threshold. Similarly, an exit is recorded when an insurance group's direct written premium falls below the threshold.

Market Growth

Market growth can be a measure of competition, as growing markets normally attract competitors. Market growth can be initiated by two events. One is when new consumers enter into the market and demand new insurance coverages. The second is when existing consumers start to purchase additional coverage, such as when property values increase or consumers purchase more expensive automobiles as their incomes rise. In general, both of these events create market growth over time. A word of caution: Increasing premium rates may cause direct written premium to increase, giving the appearance of market growth when, in fact, there is none.

Premium Growth:

Premium growth for the last three years (Column 6a) and the last 10 years (Column 6b) are in terms of cumulative percentage change in direct written premium over the respective periods.

Availability

Availability is an important indication of market performance. Insurance companies in the standard (voluntary) market are not required to sell their products to everyone. By law, they must be able to pay claims and stay solvent, and they are allowed to profit from sales and investments. They do this by correctly choosing and pricing risk, servicing claims, and investing premiums. The selective nature of the business means that not all consumers will be able to purchase insurance from a standard insurer. When insurance is limited or not available through the voluntary market, a consumer may turn to the residual or surplus lines markets for coverage. Growth in these alternative markets may reflect a declining number of sellers in the standard market or a limited capacity to add new business.

Some specialized types of insurance may only be available through the surplus lines market. Surplus lines insurers, however, are exempt from most state insurance laws, and policyholders are not protected by state guaranty funds. For this reason, in many states, insurance can only be purchased from a surplus lines carrier when the insurance commissioner determines that the specific coverage is not sufficiently available from a regulated entity. The Liability Risk Retention Act gives companies with similar commercial liability risks the ability to create and own a risk retention group for the purpose of collectively insuring those risks. Although these entities are not conventionally thought of as residual market mechanisms because they do attempt to compete with traditional insurers on price and coverage, they typically begin to appear in a market when a market disruption has occurred. Risk retention groups are governed by the regulatory laws and requirements in their domiciliary state and permitted, by federal law, to write business in any state. Like surplus lines insurers, policyholders/owners of risk retention groups receive no protection from state guaranty funds.

Risk Retention Market Shares

The risk retention market shares are determined by dividing the sum of direct premium written by risk retention groups by the total direct premium written. The risk retention market share for the latest year (Column 7a) and the latest five-year mean (Column 7b) are displayed for all 50 states, the District of Columbia and U.S. territories. Because risk retention groups only apply to commercial risks, this column in the Report is not applicable for the personal lines data.

Surplus Lines Market Shares

The surplus lines market shares are determined by dividing the sum of direct premium written by surplus lines insurers by the total direct premium written. The surplus lines market share for the latest year (Column 8a) and the latest five-year mean (Column 8b) are displayed for all 50 states, the District of Columbia and U.S. territories.

Profitability

Insurer profitability results can be examined to determine whether a market is attractive to insurers to enter, thereby creating greater competition, or unattractive, causing insurers that are in the market to leave. Persistently high levels of profitability may indicate that a market is failing to attract competitors, thus enabling non-competitive rates of return to be earned. Alternatively, persistently low levels of profitability may indicate that insurers may have difficulty estimating losses and/or are unable to set premium rates at adequate levels. Since the NAIC began publication of its *Profitability Report* in 1974, it has become the standard report for gauging the profitability of insurance markets in the United States.

Return on Net Worth:

The return on net worth (Column 9), taken from the NAIC's Profitability Report, is an approximation of total profit after taxes divided by allocated capital and surplus, adjusted to place it on a GAAP basis. Allocated net investment income and realized capital gains of insurers are included in total profit. The return helps regulators and others evaluate the profits earned in a particular market in relation to the net worth that is committed to that market. Because the results for a single year can be highly variable and, thus, of limited meaningfulness, the average return over a 10-year period is shown. This report is not able to include return on net worth data for the Earthquake line because Earthquake is not included separately within the Profitability Report.

Other Measures

While the data included in this database represent relevant measures of the competitive nature of the marketplace, other measurements of the same market characteristics might give somewhat different indications. Also, there are many other aspects of competitiveness that are not addressed in this publication. These include such considerations as the level of knowledge of market participants and product homogeneity, neither of which can be readily ascertained and/or measured using the data sources relied upon in this report. Similarly, the conduct of market participants reflects upon the competitiveness of a market, but at present cannot be quantified with sufficient facility to be contemplated in this database.

A Special Note on Residual Market Share

Residual market mechanisms are entities created by state laws to provide insurance to consumers ineligible for coverage in the standard market. Residual market rates are generally higher than standard market rates because the insureds typically represent a greater level of risk. In most states, some types of personal insurance, such as automobile, are offered through residual market operations.

As insurers in the voluntary market reduce their exposure or withdraw from a line of business, the residual market's premium share is likely to increase. The residual market share would be determined by dividing the sum of residual market direct premium written by total direct premium written. **However, as residual market premiums are currently not reported to states in a consistent manner, the size of the residual market in many states could not accurately be determined for this report. State regulators are encouraged to examine their state's residual market share trends over time for any indication of changes to a market's competitive landscape.**

National Association of Insurance Commissioners

Formed in 1871, the National Association of Insurance Commissioners (NAIC) is a voluntary organization of the chief insurance regulatory officials of the 50 states, the District of Columbia and five U.S. territories. The NAIC has three offices: Executive Office, Washington, D.C.; Central Office, Kansas City, Mo.; and Securities Valuation Office, New York City.

The NAIC serves the needs of consumers and the industry, with an overriding objective of supporting state insurance regulators as they protect consumers and maintain the financial stability of the insurance marketplace.

For more information, visit www.naic.org.
